

NHS & IBM - What's the plan: Bi-Weekly Report 7

Byoung Hun Min, Shivam Shah, Eduard Ursinschi

Overview

In the past two weeks we have carried on development of the app and made progress with some features of the app. This includes taking, editing and deleting consultation notes, as well as, editing the user's profile. Additionally, the What's The Plan team and the client had a catch up conference call to discuss the progress of the project, the struggles faced in implementing openEHR, and the key milestones for app development. We were referred to a Code4Health contact who has put us in contact with an expert in openEHR who we hope can help us with openEHR implementation.

Meetings

31st January:

- Carried on development of the app with the team.

7th February:

- Discussed conference call with client and what must be discussed with them. Also carried on development of the app.

Completed tasks

- Completed the consultation notes page.
- Added feature for editing profile
- Added features for editing notes and deleting notes with minor improvements in the UI.
- Catch up with client regarding project progress.

Problems

- The team is struggling with developing archetypes and the openEHR approach.

Plan for the next two weeks

- Finish most of the app development to be able to comfortably reach key milestone of finishing first propitious app by 9th March.
- Communicate with Code4Health contact that can help with openEHR implementation.

Individual reflection

Shivam Shah - Over the past two weeks, I continued creating front end pages for the app using the Ionic frontend framework. I also took on the responsibility of becoming Client Liaison from Brian because it helped him focus more on his role as Technical Lead and prioritise duties relating to that more.

As Chief Editor, I continued documenting team Meeting Minutes and writing Biweekly Reports.

Byoung Hun Min - Continued development with the app. Completed the consultation notes page and added small additional features such as editing profile, editing notes and deleting notes with minor improvements in the UI.

Eduard Ursinschi -

Appendix

Screenshots of app prototype -
